

# Foster Care Q2 Impact Report

**65%**

of animals in our  
care were in foster  
homes, on average

## Over 6 Months of Special Care for Two Bonded Sisters

Alaska and Aspen are bonded sisters who first entered foster care in January 2022.

They both had a complicated medical history with concerns of chronic diarrhea, vomiting, plus an blocked tear duct and eye ulcer for Aspen.

They needed extra care from a foster parent who can regularly administer their medications, keep up with their special diets, and monitor them closely. After diet trials and medications, their medical condition were under control and they were ready for adoption!

Their foster parent spent 6 months going above and beyond to help these two feel better. We're happy to share that they found their family that is willing to continue their complex care in their forever home.

## A Trio of Puppies

Theo, Marcus, and Amelia were transferred into our care from Manitoba at approximately 7 weeks old.

They were all suffering with chronic diarrhea so they were sent to a loving foster home to feel better. Theo and Marcus were doing well, but Amelia did not want to eat – which is very important for a healthy and growing pup!

With continued encouragement from their foster family, all three puppies grew bigger and healthier. They received their puppy vaccines and spay and neuter surgeries before finding their forever homes.

## A Temporary Home Becomes Her Forever Home

Rosey, a senior dog, was originally enlisted in our Urgent Care program. Although she had some medical concerns such as arthritis, Polyuria and polydipsia, her foster parents simply adored her.

Sadly, Rosey's family decided that it would be best to surrender her to give her the care that she needed.

After having Rosey in their home for over a year, her foster family could not let her go and they decided to adopt her.
