## Long Stay Dog Finds his Forever Home

Brover's life has not been easy. He was transferred to our care in April 2021 with a complicated medical history.

This handsome fella had weight bearing lameness on both hind legs from a previous fracture. He also had alopecia and tested positive for heartworm.

He wanted to run and play, but he had to take it slow because he received leg surgery and was taking medication for heartworm. While Brover received ongoing medical treatment, his Foster Parents worked with a Trainer to keep him mentally active by teaching him tricks and helping him to be more comfortable in his new surroundings, sharing his belongings, and being in the presence of other dogs.

During his recovery time, Brover never strayed away from being his goofy, loveable self – and as soon as he felt better, he found his forever home!

## Giving Brando a Second Chance

Brando had a euthanasia appointment scheduled but his pet parent reached out to see if we could help socialize the puppy with training. Brando was then surrendered into our care.

Given the socialization status, our training team immediately started a behaviour modification plan and looked to place him in a foster home. A trainer from our Public Training team decided to foster Brando and work with him. Eventually, his behaviour improved and our Division Manager of Public Veterinary Services adopted Brando.

## Parvovirus Puppies

Lennon, Lynn and Lawrence, adorable 2-month-old mastiff puppies, were surrendered into our care because they were showing signs of Parvovirus.

Parvovirus is an extremely contagious disease and can be fatal if it is not treated.

After running some tests to confirm that they had Parvovirus, they were immediately given around the clock treatment with IV fluids, IV antibiotics, and close monitoring.

Thanks to the support from our medical team and onsite staff, these playful pups are making progress in their Parvovirus treatment.
