Q2 Impact Report

Caring for 2 Mothers and Their 19 Puppies

On April 27, 2023, Ava and her 7 puppies, and a very pregnant 1-year-old pup named Pickles, arrived at Toronto Humane Society after their long journey from Northern Ontario.

Thanks to our amazing foster parents, Ava and her little cheese family (Brie, Asiago, Mascarpone, Cotija, Burrata, Colby and Boursin) quickly went into a foster home less than 28 hours after arriving.

We sent a social media shoutout to help find Pickles a foster home before she gave birth, but she had other plans. Pickles began to give birth in the shelter the morning of May 2nd. By the afternoon, Pickles amazed the staff with the grand total of 11 puppies! Dill, Gherkin, Bread, Butter, Kimchi, Relish, Cornichons, Bicks, Spears, Rick and Salad.

Thankfully another foster parent offered to take Pickles and all 11 of her little pickles and picked them all up on May 5th. Everyone is happy and well in their foster homes.

Animals Were
Transferred to
Network Partners

To increase our lifesaving capacity Toronto Humane Society will facilitate the transfer of animals and place them into the care of our Transport Network Partners.

Helping cats with Out of Box Elimination Behaviour

Kitty Gaze, Leon, and Rory were all recently transferred into our care to help them address their unwanted out-of-box elimination behaviour.

We're happy to report that after all three cats received support, they were soon after adopted.

We reached out to our transfer partner to share tips and tricks to help care for cats with this sort of behaviour. Hopefully this guidance will help them to support cats that use the potty outside of their litterbox in their care moving forward.

Helping a Tiny Kitten Survive

Three bottle-feeder kittens were transferred into our care. They weren't in great shape – they weren't eating, using the bathroom, and their bodies were cold.

Our team worked around the clock to provide them medical care and support to help these tiny kittens get healthy. Ziggan was the only kitten to survive. He was placed in a foster home until he was big and old enough for his neuter surgery, and soon after this little kitten started his new journey in his forever home.
