## Q1 Impact Report

# 162

TNR Surgeries Provided

Our Trap Neuter Return (TNR) program, ensures that community cats are given support to improve their wellness so they can live whole and healthy lives. This service is provided free of charge to caretakers.

### Removing Hair Ties to Save a Cat's Life

A pet parent was very worried after her cat stopped eating, stopped using the bathroom, and started to become very lethargic. These behaviours are very concerning and are usually a good indicator that something is wrong with your pet.

Without much information on why her cat's health started to rapidly decline, she reached out to Toronto Humane Society's Public Veterinary clinic for a humane euthanasia appointment.

During her cat's wellness exam, we found that her cat had many hair ties obstructing her intestines. Surgery was performed to remove the foreign objects and now her cat is doing very well! She expressed gratitude for saving her best friend.

# 1,125

Surgeries Performed

This includes \$12,699.86 worth of public subsidy that was provided during the months of January, February, and March.

Subsidy funding helps make essential veterinary care more affordable, which in turns helps more pet parents in our community care for their pets and keep more families together.

### Keeping Snow Safe

A pet parent was struggling to care for 6 dogs and wanted to ensure that her female dog, Snow\*, would not get pregnant.

She contacted our Public Veterinary Clinic, and our team was able to give Snow an expedited appointment. Luckily, she was not yet pregnant – and now, won't be!

The pet parent also used our rehoming services to help some of their dogs find new homes.

### Providing Preventative Care for 9 Newborn Puppies

After Coco\* had 13 puppies, her pet parent reached out to get her spayed once her puppies were weaned.

9 of Coco's puppies survived and they all came in for their vaccine, deworming and spay/ neuter surgeries at 9-weeks-old with their mom. Coco's pet parent plans on rehoming the puppies and wanted to make sure that they got their necessary preventative veterinary care before sending them to their new homes.
