Impact Story: Setting Tyler and His Family Up for Success

Tyler arrived at Toronto Humane Society facing medical and behavioural challenges, including skin issues and reactivity. His foster family quickly grew attached but worried about managing his reactivity long-term.

To support a successful adoption, Tyler and his foster parent were enrolled in a small-group reactive dog class, fully covered through subsidized care. This proactive support gave the family the skills and confidence they needed, strengthening the bond between Tyler and his family.

A Message from Our CEO: This quarter, Toronto Humane Society celebrated the human-animal bond through our signature events. Paws in the Park at 11 River Street and the Humane Open Golf Tournament at Glen Angus Golf Club brought the community together, helped pets find loving homes, and raised vital funds for our programs. Together, we continue supporting pets and those who love them while building stronger, lasting human-animal families.

Public Veterinary Services Impact Story: Coco

Coco was diagnosed with pyometra at a private clinic, but her family was unable to afford the necessary care.

When the veterinarian reached out to Toronto Humane Society, we were able to step in and schedule her treatment within just three days. Today, Coco is happy, healthy, and thriving—thanks to timely support that saved her life and kept her family together.

Signature Events Bringing Our Community Together

This quarter, Toronto Humane Society brought the community together through Paws in the Park at 11 River Street and the Humane Open Golf Tournament at Glen Angus Golf Club. Visitors helped animals find loving homes, raised vital funds, and connected with fellow animal lovers. Both events celebrated the human-animal bond, strengthened community ties, and showcased the collective impact of supporting pets and those who love them.

Adoption Impact Story: Winston

Winston was transferred into our care during the Pledge for Paws campaign with a chronic wound on his right paw pad and mild lameness. With guidance from dermatology and surgery specialists, targeted treatment, and ongoing foster support, his paw has been healing well, and his lameness has improved. Throughout his recovery, Winston showed a sweet, resilient temperament, responding positively to training and interactions with other pets. He was cleared for adoption and celebrated his new beginning with his family by attending our Paws in the Park event.

Advancing Heartworm Research

Dr. Linda Jacobson, Director of Science and Advancement, completed a retrospective Miami-Dade heartworm study, including a sub-study on the safety of spay/neuter in heartworm-positive dogs. Findings, along with preliminary results from our prospective heartworm study, were presented at the American Heartworm Society Symposium in September.

Fundraising Feature: Supporting New Beginnings Through our Pledge for Paws Campaign

On August 16, we reimagined our annual Paws in the Park event with a digital Pledge for Paws campaign.

Supporters helped give new beginnings to over 60 pets, including cats and dogs transferred from partner organizations throughout the summer.

Many pets were adopted before the campaign, and others found their homes during the event, thanks to the generosity of donors pledging for our four team leads—Tiger, Sarge, Frankie, and Lucky.
